cipher VVVRBACP

key COVERCOVER...

plaintext THANKYOU

In encrypting plaintext, the cipher letter is found at the intersection of the column headed by the plaintext letter and the row indexed by the key letter. To decrypt ciphertext, the plaintext letter is found at the head of the column determined by the intersection of the diagonal containing the cipher letter and the row containing the key letter.

Encryption keys

Practical examples

A man in a dark suit, white shirt, and patterned tie stands in an office. He is positioned in front of a glass door with horizontal blinds. A sign on the door reads "MEETING IN PROGRESS". To the left, there is a window with horizontal blinds and a black office chair. The scene is lit with indoor office lighting.

**Thank you for your attention!**
